

Figure S1. Graphs representing independent growth experiments. Active cultures of strains *630Δerm pMC211* (vector control, MC282), *630Δerm pMC632* (*pPcprA::vanZ1*, MC907), *Δskin + pMC211* (vector control, MC1260), and *Δskin pMC632* (*pPcprA::vanZ1*, MC1261) were diluted in BHIS, or with supplementation with 0.15 µg/ml teicoplanin or 1.0 µg/ml vancomycin.
